Subject: Dominion Virginia City Hybrid Energy Center in Wise County

I would like to comment on the Virginia City Hybrid Energy Center. As a resident of northern Virginia which is the area supposedly in need of more energy in the future I would like to say this plant is completely unnecessary. We do not need to cause more air and water pollution in the southwestern VA or the rest of the state in order to generate more energy. Energy demand can and should be reduced with an energy efficiency program first. This type of program would be much cheaper than this proposed coal plant and would not cause any additional pollution. If you are thinking about a maximum amount for the emissions allowed in the permit, that number should be zero. Our air and water are already being polluted too much by the existing coal plants in southwest VA and elsewhere. We should not allow even more pollution from this proposed plant when there is a better way.

Thank you for your time,
Michael Feldman
